

3/24/79

Dear Bill,

This is on the chance you haven't aired your report yet.

Early this morning I found a copy of the Baltimore FBI's teletype to FBIHQ in which it reported the Sibert-O'Neill autopsy observations. It is dated at 2 a.m. 11/23/63, which would be almost the first possible moment after they reached their office and communicated with Baltimore or got to Baltimore whence the TT was sent.

The file identification is 62-109060-459. It is the 459th record in the HQ's main assassination file, as the clerks serialized on filing.

Rather than referring to "a missile" it states that "two metal fragments removed from brain, one is seven by two millimeters and the other three by one millimeters."

It also states that full body X-rays were taken. In this it is confirmed by much Commission testimony. However, the existing and known X-rays do not include "full body," as you may recall I emphasized in Post Mortem.

Without waiting for the copy of what Evica got allegedly connecting Ruby and Marcello I've filed an appeal based on what you told me.

Best wishes,
