6,940 Took Drugs; Army Still Testing By Bill Richards

Washington Post Staff Wallac

V top civilian drug researchor for the Army said yester day a total of 6,940 servicemen have been involved in chemical and drug experiments run by the Army and the the tests are still joint on Filtewood Arsenal in north. cast Maryland.

Dr. Van Sun, civilian medict-1 director at the Edgewood -- facility and head of the Alter is the standard

these involved in the to the Bould strings Committee and to imitteday officials yesterday.

Sim said the testing of LSD vas halted by the Army in 967 but that some two dezen ther drugs—ranging from cohol to hallucinogens from ve continued to be used in ts on servicemen at the ility. "We have a program and

is continuing," Sim said. We are testing all types of rugs and chemicals and will ontinue to do so because it s important to the national ecurity of this country,"

Sim's statement is the first acknowledgement, that, Army testing of drugs on humans is still going on. The National Research Act of 1974, which prohibits some types of human experimentation with drugs by government agencies, does not apply to the military.

A spokesman for the Army declined to comment or Sim's figures and said a complete tally of all those involved in drug experiments is being compiled. Last Friday the Army said it had tested LSD on nearly 1,500 civilians and servicemen between 1956 and 1967, when the LSD tests were halted. There was no mention of the announcement of any other type of drug testing.

Sim, who has been in charge of the civilian side of the re-search at Edgewood since 1955, said some of the service-men on his list may have been involved in only minor types of exposure to chemicals and drugs, such as that involved in testing gas masks. See LSD, A6, Col. 2

"It was a hell of a time," he said. "Before the experiment I was a happy-go-lucky guy and then these weird things started to happen. I couldn't figure out what was going on. No one ever told us anything about those tests except that they said right before we drank the LSD that we'd get a little high like you do when you drink.'

The man still has a copy of the letter of commendation, signed by Col. Albert L. Dreishbach, the director of medical esearch at Aberdeen at the time. "You are hereby commended for exposing yourself to experiments above and be-yond the call of duty;" the commendation reads. "Your performance and behavior are in keeping with the highest traditions of the military service."

Like others who took part in drug experiments run by the Army, the former Air Force sergeant said, he was told not to reveal his part in the tests because they were classified and disclosure would violate national security.

An Air Force spokesman said yesterday that he had no information on how many others from the Air Force took part in the experiments with LSD and other drugs.

An order issued by the Army in April, 1957, however, states that 50 volunteers from the Army were needed each month for tests at Edgewood Arsenal. An additional 20 volunteers were to be sup-plied monthly by other service branches, according to the memo. ÷Г, .
