After you returned I started preparing for my 77 th birthday now less that two month away with rtiple-bypass surgery that went so well John $\mathrm{H}_{\mathrm{o}}$ ins would have packed me off for home if I'd had more dependable transportation for the snow and ice that awaited ne at Frederick on the sixth day. irade it on the 7 th and have been doing pix quite well in the chest since. More problems with the legs, trough. (That hospital, if you do not know, is in altinore.) I doubt that anything can be done about the legs so all I can do is continue to hope that I can hold onto them longer.

Because I have to keep the legs elevated when I'口 not wallines, and now the briefest standing makes them swell with the blood that is so slow returning to the heart, as you may recall I have to type sort of sideways. With my impaired vision my hunt-and-peck typing is even worse.

Sone months ago I tried an electronic typewriter, and Ind have loved it if I had been a le to use it. Mmoncs the problems was my inability to avoid sone of the controls I did not intend to strike. I erased entirez lines and had multitudes of caps when I did not intend it.

Since returning hoke from this surgery I've been trying, by phone to locate something like the wonderful gadget John $S$ used when you were here. I've not gone to the places that sell word processors and computers beaause I cant stand and they send me liteature only on what in the space I have is massive machines that first won't fit and second are much more than I want or need. I've been intending to write and ask you about that small machine or any other like it of which you know.

But in the time I've had I've been reminiscing, as In reminded, continuing to battle recalcitrant officialdom, particularly the FBI, which appears to be preparing another to defame ne, and recording the facts and truth about those events of the din past that the FBI is disgorging. Some of my older friends have been enjoying the copies I've been seeding them.

Ad ad for an LC Smith word processor, lap size, in today's WxPost reminds ne that I haven't asked you for any information you can provide. I'll make further inquiries about what $\frac{I}{y}$ know is available in the US now but it is larger than what John $S$. had. It may or may not have advantages or other disadvantages.

I doubt I' 11 be able to see the keyboard well enough were I to try to use the machine as ${ }^{\text {John }} \mathrm{S}$. did because my eyes may not be good enough at that distance. I don't know and cant until I can try to use one. One of the problems I have with this fine Hermes in its 23 rd year that, after many millions of words have burdened it stall types a straight line if I do not prevent is is the closeness of the key pads to each other. I may not be able to avoid this in any modern machine. But I strike the wrong letter too often. Perhaps I can determine whethe. I can use it from literature on your machine. I'll appreciate anything you can send, any suggestion you can moke.

Jerry Kay, who has rude both an art and a science of undependability, tells me you are interested in putting in Jiruay's book on IV. If $y$ so, you see in it what I didn't. It is, aside from the little personal he has in it, utterly irrelevant and the personal stuff misrepresents hin as I learned about him from him and from others. If you have any further interest in hin, he had an associate in the fulham bank job. He told me so.

You also told me that "elanson told you I had a high opinion of his bock. All I tret told you is that I'd not expressed any opinion to him. I'f I'd known you were going to go for it as you did $\mathbb{K}^{\prime} d$ have said more but I did want to avid influencing or even appearing to influence what you did. At my age and with my health limitations I also avoid all the unnecessary controversy + can. My opinion of his book id the exact opposite. For the his orical record only, aside from curiosity, I'd apmeciate knowing whatever else you'd feel free in telling me about that, I've annotated a copy for the historical record only and have made no distribution of it. " m does $t$ even know and I cant take controversy as

Thanks and our best to you both, sincerely, aroid Weisbege 7627 Old Receiver
