Dear Fellow Physician:

You have heard the story about the dog chasing the hare and the hare's **his escape.** The other dogs ridiculed the dog in the chase because he didn't catch the hare. He replied, "you don't understand the conditions of the chase. I was running for my dinner; the hare was running for his life." We are living this same attitude today as well as Yogi Berra, Medicine and your country. We know we must unite and move forward together in removing this cancerous growth of Federal Government from our country. Upon this battle could depend our survival. FDA knows that he must break us or lose his cause completely.

In our field, we know we are truly rendering all services to humanity. The only reward we are given is unwarranted and unjust compensation. Our great compensation in our work is the genuine happiness we give to our patients. Money cannot buy the teenagers complete personality development, the increased pride of our patients, the marriages saved, the longer life span, better health, less morbidity and our patients feeling better than they have felt in years without any danger of injuring their health.

The only hare we see how the Federal Government has initiated the campaign to control completely or exterminate our field of Medicine. We also have not been given answers to many questions that have arisen. Why has the Supreme Court banned prayer in our schools and yet allows Communists to teach our children as well as work in our defense plants? Why increase taxes when Russia who's planes are killing our service men? Why are our tax dollars used to pay for law suits and extremists who participate in riots? Is this really America when an enemy seizes our ship and we become apologetic? Why are our men protecting us and the guilty parties are excused because of a Federal Government wing ideas? Is it right for people to refuse an opportunity to work when we beg for them, because they are afraid they might lose an unemployment check? Why can't I sell my home to whomever I want? Why is the FDA tough on food adulterants and soft on marijuana?

The above questions have revealed a widespread feeling of
isolation and a sense of being "left out" of the
action that is being taken. I am sure that you
will stand very close to the majority of the
his word, depend, and a lack of genuine understanding
justices being directed against us. George Wallace will fight any injustice whether it
be inside our ranks or against our accusers, and all I desire is that all facts be
examined honestly. He will not break any promise and he will not say anything
or to anyone who is right and his most sincere desire is to help the oppressed.

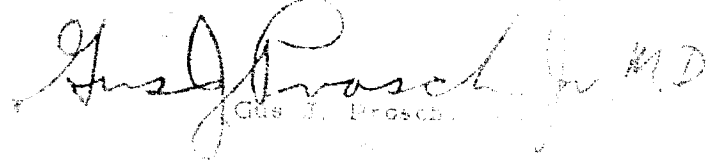

He can help us and ~~will help us~~ but it's going to take National Action
to make his election a certainty. Your financial contribution is an investment
in YOU. We must not only open our purses but also our hearts--so the hearts
of others will not remain closed. We must give our time, care, prayers, love
and ourselves.

Enclosed is an official enrollment blank for THE NATIONAL ACTION PARTY which
is self-explanatory. Please meditate on these thoughts and remember we can
vote ourselves into slavery, but we cannot vote ourselves out of it.

In our very hands could easily be the future of our country. It is
our clear intentions to protect our heritage and N.A.P. is our only hope.
Through our reasoning ability, a gift of God, we have the power of choice--the
power to choose failure or success, mediocrity or superior citizenship.

As medical men, let us prove with action that we want opportunity, not se-
curity. We want the "medical gold rush", the dream, the vision, the hope, the
to build. We are willing to fight for the right to fail or succeed, we want
equality, perseverance and a self-reliance. We will not transgress a duty for a
reward, cower before any threat, bend to any tyrant. Let's seize the chance
of life--not the "guaranteed existence". Let's stand proud, and demand
as we demand the privilege to think, act for ourselves and take whatever conse-
quences that each may bring. Then we can enjoy the fruits of our labor, we
face life head-on, and say "thanks" to those who have tried to help us
and made everything we have possible. May we stand on your side.

Very sincerely yours,

Gus J. Prosch, M.D.
