contact with the of the person being examine'i is not re-Week guire!, and the

sound can be transmitted by telephone and recorded. Fred H. Fuller of Chevy Chase, Md., re-ceived Patents 3,855,416 through 3,855,418. The equip-ment, called the Mark II Voice Analyzer, is being produced by Norton Elec-tronics, Inc., Washington, forcement Associates, Inc., and distributed by Law Enforcement Associates, Inc., . Belleville, N. J. It is reported that about 15 machines have been ordered.

As expressed in one of the patents, the invention is intended to detect emotional stress within a voice pattern, and the presence of such stress is used to determine the truthfulness of response to questions asked

stilled interrogator. It provides a numerical indication of the stress level.

The instrument searches for variations in speech trummer. Using conventional in detection techniques, as-sessments of the truthful-nets of decelfainess of the person's theponses can be made.

Mr. Fuller has published papers on voice analysis, and has performed contracts on the subject for the Army's land warfare laboratories at the Aberdeen Prov-ing Ground in Maryland. Although the immediate use of his invention is in lie detecting, he regards its field as much broader and... hopes to develop superior personality measurement techniques.

Fred H. Fuller with the Mark II Voice Analyzer for which he was granted three patents. The device, serving as a lie detector, measures emotional stress in speech.
