Frederick, MD 21702

Dear J. Schneider,

Thanks for your 11/13 and the enclosed Loomis jewel.

You got it right re our deposing Frazier and their keeping no record of what they removed from 399 and cannot now account for. They needed only a millimeter, postage-stamp weight.

If you want not to get a response from Loomis tell him you've read Case Open and can he refute it?

Thanks and best,

My dear Howard Weisberg:

The enclosed copy of a letterhead
from Lorenson & Random House should be in front
to you.

After reading 3 letters to Lorenson, I
decided to try Lorenson. I complained about
Lorenson's instructions, "The enclosed and story"
(B. 224) I asked him to send some one (Lorenson's
note is 5'-9" tall) and place a 3' yardstick back
the arm pit of the subject, and measure the
distance to the floor over a foot when the
stick is held vertical and parallel to the body.
Randy stated the subject did not "grab" "snatch"
the garment. Why the hanging on the bag?
do not know. I did say that only three
people could tell me how the note was
carried into the TSPD. Obviously (note is
not filed in the index) even emphatic in his
denial that Oswald carried anything into
the TSPD on the morning of Mar. 27, 1963.

I never bothered with the neutron
activation stuff until Lorenson's report
and testimony before the HSCOH. That explains
why I did not get to page 409 in Prof. Martin
On that page you say something explosive:
"Frogan had taken all the metal remaining from
Atom Bullet 399 and then put it in the
lead removed came from Connally's wounds. Can
you give me the observations for this statement.
My interest is that I was
shocked of Lorenson's findings. Your statement
concerns what I had suggested but could not
establish. I want to work Lorenson.
Sincerely, Joseph Schneider
