Dear George.

I don't recall whether I sent you a copy of my last week's memo to Jim on about 6,000 pages I got under discovery in the spectro case, after remand. They pertain to the preservation, meaning non-destruction, of records, including evidence. Prohibited. I enclose the additional memo I've just finished because at pertains to false claims, including under oath, by the FBI, in this litigation.

Ferhaps you will remember that when I first got some of the withheld information I gave it to you and you did a piece.

Last week's memo includes the Gallagher conjecture that he destroyed the JFK specimens he tested by neutron activation analysis. Jim can provide easier and faster than I if you want that memo and the attachments. If I didn't send them.

This memo includes the proof that there was no dangerous radioactivity involved.

Meaning that in addition to the prohibition against destruction the reason for the alleged destruction is and was known to be false.

So why did they destroy, assuming they did? Only because they didn't want their work to be checked.

In the first memo I refer to testing pertaining to other shooting. I brought that report of another shot to light in, I think, my second book. I now have the FHI's records, not from HQ. HQ wanted to divest itself of all the results and twice sent them back to Dallas, which had said at the outset for HQ not to send them back. This proof has never been reported and, in fact, that past of my second book received no attention except in Dallas, where of all things, when I was doing a talk show, the guy who made the initial report to the FHI called in.

I'm supposed to be getting more Dallas records, including their files on the critics, DeMohrenschildt and summaries of their electronic surveillances of Marina. I volunteered this because I don't want and don't think anyone should have the extremely personal things I know they got and distributed in summary. Let me know if interested. Best,
