

8/29/70

Dear Ed,

Spent 20 wearing hours yesterday going over the pedantic editing of the second part of COUP' which will now be FRAMEUP. I regret it is sterile, with nothing both obvious and unnecessary not added (when it needs cutting), but I think it is of such a character it will still be an enormously important work.

I have to return to it and other pressing things, so this answer to your 8/22 will have to be brief.

Thanks for the Dark Day chapter. It is a strange coincidence.

The hypnotism bit is interesting to me, for I've felt it is possible that Sirhan may be the closest thing yet to a "Manchurian Candidate".

Courageous or not, that rotten stuff in Computers hurts us all. With such friends as these, can credibility ever be recaptured?

Thanks for everything

Camp al' g'at in  
a getting title for  
your work.

It is no accident  
that those on the  
"Bum" of success  
were "terminal" with  
extreme prejudice.

The article in  
Computers and Automation  
has shown no doubt  
of coverage.

Unfortunatly, that  
abound in error and  
"Parrotic" allegations (The  
Confusion of Names) has  
no that the entire  
credibility is destroyed.  
I am a regular reader.

Sincerely,  
|

Friedman  
Mr.

2/22/70

Dear Howard,  
Please keep the  
report from David Star.  
It does provide  
an interesting (if  
perhaps irrelevant)  
corroboration with  
later events.  
Big companies, huge  
judicial writing and  
diagnoses of disorders,

The Hiveskin Project,  
Conducted by Research  
of David's Big M-  
New Orleans with the  
and of William Gumbel.

Re the Organization  
of R.F.K., I want you  
make separate cover

The Berlin Gazette,  
I would like to know  
if you have any information

on the subject of  
Mackinac Island, the  
treatment of the  
(see page 140) was  
the fact above the

level of the ground.

I discussed the  
possibility of the  
form of mental programming  
with a psychologist  
and was told that  
it was just the  
journal of current  
research.
