4/8/92

Dear Harry,

Sorry it was not possible to respond to your 4/4 and to thank you for its enclosures until now. While I await the beginning of my celebration of my 79th birthday when my sister-in-law gets here to drive me to Hopkins for my monthly visit. When we get back I have a neurological consultation this afternoon. So, while letters and press inquiries have slack off some medical appointments have increased and it has been weeks since I was able to do any of my own work.

I've spent two nights at a sleep-disturbance clinic at Shady Grove, each time for testing. The first shows that when I sleep on my back I do not breathe more than 75% of the time but that I do about 70% of the time when I sleep on my side. Not good, I'm told, that it means the sleep is not really restful, that it contributes to tiredness and that it increases the possibility of a stroke. Of which they believe I've had three small ones.

So you can see I'm sympathetic to your mother's condition and to your concern over it!.

The second test was to see whether a mask attached to a Bismo that provides air would help. It would not stay on so I'll get no good from that.

I have no way of finding out why Rick was suspended. Do you think Lifton made good on his reported threat? David would tell you as well as me if he knows. I've not heard from him for a while. Real sorry about Rick. Hasn't he told you?

Congratulations on helping to nab a felon! Good if more people cared and tried!

My interest in Perry is centered on his statements about the anterior neck wound. I'd appreciate anything on that and when you've time the Bell transcript.

Thanks for straightening me out on the Dallas conference! You got quite a few together!
ine
Image with some effort and cost, not easy of cheap.

Getting all those doctors to talk on the record was no mean accomplishment!

Ride here. Good luck on your tour!

Home from Hopkins to
find a book from C & G here. Thanks.
I'll give it to the college library

Best
