ARRASSIKATION OF PRESIDENT JOHN PERZGERALD CHRISTOFT DALLAS, TEXAS MOYEURER 22, 1983

CO:DALLAE

Reference Daltimore letter to Dareau dated January 12, 1971, and Bureau mirtel to Daltimore dated December 10, 1970.

Reference Baltimore letter submitted three bullets
to the FBI Laboratory which were received by the Baltimore
Difice from Earold Weisberg, Route 8, Frederick, Maryland 21701,
along with a portion of a plat of Dealey Plaza, Dallas, Texas,
Exclosed are those three bullets marked A, B and C and the
plat. These items should be returned personally to Mr. Veisberg.
Who should be advised that nothing was found to associate
the Caliber .30 M2 (Item A) bullet from the planter in Dealey Plaza
with any evidence received in connection with the
assassination of President Kennedy.

The following is for the information of Baltimore and Dallas and is not to be furnished to Feisberg.

The bullets submitted are described as:

Plaza, Dalles, Toxas, on October 4, 1970

1329 Dullet allegedly found in Direction reals

Plaza, Dalles, Toxas, on October 4, 1970

18 JAN 22 1971

Cabo Caliber .30 M2 (.30-06 Epringfield) U. S. Military bulled received \$238 Call

C331 Calibor 6.54m Italian Hilitary (6.6mm - Hannlicher-Carcano) bullet received with CE329

Re: ASSASSINATION OF PRESIDENT
JOHN FITZGERALD KENNEDY
DALLAS, TEXAS
NOVEMBER 22, 1963
62-100060

jacketed lead-cored bullet, weighing 149.6 grains, which was fired from a barrel rifled with four lands and grooves, right twist. The physical characteristics of the rifling impressions in C329 are like those produced by .30 caliber (.30-00 Springfield) U. S. Military riflesand some models of Vinchester, Rouington, High Ftandard and Sears, Roeduck and Company rifles and possibly other weapons. A .30-06 Springfield Russian Military rifle was manufactured but this rifle produces different rifling impressions from those in C329. A few dents and nicks are prosent in the nose of this bullet, apparently made when it was fired into dirt or sand. Extensive corrosion on the surface of the bullet has obliterated all individual microscopic characteristics of the type needed for identification with a particular rifle.

Specimen C330 is a Caliber .30 M2 copper-jackoted lead-cored U. S. Military type bullet which weighs 131.8 grains. This bullet is identical in shape and construction to C329, but is unfired.

No bullets like C329 or C330 were recovered in connection with the assassination of President Kennedy. The only bullets (or cartridge cases) recovered in the assassination were caliber G.5mm (approximately .28") Italian Military bullets commonly referred to as G.5mm Mannlicher-Carcago. Specimen C331 is this caliber bullet but is different from the copper-jacketed assassination bullets in that C331 is a copper-plated steel-jacketed bullet. Specimen C331 has been fired and is slightly distorted but the cause of the distortion is not known. It is possible an attempt was sade to duplicate warron Commission Exhibit CE308, found on a stretcher in Parkland Respital after the assassination. Such duplication attempts would be meaningless wince CE399 is copper-jacketed whereas C331 is steel-jacketed.

NOTE: The bullets, C329, C330 and C331 were received from Harold Weisberg, a man who has written several books critical of the Warren Commission, the PBI, Secret Service, Police Agencies and other branches of the government relating to the assassination investigation.

Weisberg alleges the bullet C329, was recently found in the area where President Kennedy was killed. He believes the bullet is a "Plant" but offers it for any examination we care to make. By letter dated December 10, 1970, the Baltimore Office was requested to obtain these bullets. The complete results of the Laboratory examination are not being furnished to weisberg because of his background and because we do not want him to be in a position to state that the YBI was cooperating with him in this matter. Weisberg has sued the government for disallowing his claim under the Freedom of Information Act for information concerning the assassination. Therefore the results of the Laboratory examination are being furnished to Baltimore and Dallas by letter rather than by Laboratory report and the examiners notes are being retained in the Laboratory Files with other similar material.

Copies of plat as . O pholosof bullet c329, c330, c331 retrivieling Lab. Files. 1/2
