[Supreme] Court Bars Plea on Kennedy Data

Material on Assassination Denied to Pathologist [Dr. John Nichols]

.....

According to [the United States Court of Appeals for the 10th Circuit, whose decision was appealed by Dr. Nichols], the Freedom of Information Act is not applicable to the assassination items because the General Service Administration's agreement with the Kennedy family provides that the articles will be tightly guarded as long as any member of the President's immediate family is alive.

In recent months the Kennedy family's representative, Prof. Burke Marshall of Yale Law School, has begun to grant permission to some medical experts to see many of the items in the archives, including much of the material sought by Dr. Nichols. The Kansas pathologist requested permission but has not been permitted to see the items.
