

JFK Death Theory Debunked

San Diego

An independent medical investigator, confirming the findings of the Warren Commission, says only two bullets were fired at President John F. Kennedy and both came from the gun of Lee Harvey Oswald.

Dr. John K. Lattimore was allowed to examine the evidence after the Kennedy family relaxed its inspection restrictions. Previously, only government representatives had been allowed to look at the pictures and X-rays.

Lattimore was allowed to examine the evidence after the Kennedy family relaxed its inspection restrictions. Previously, only government representatives had been allowed to look at the pictures and X-rays.

Lattimore, an expert on medi-

cal ballistics, said in an interview Monday night that "if you look at the evidence, both bullets were recovered and both came out of Oswald's gun to the exclusion of all other guns."

In an interview, Lattimore said Monday night that "if you look at the evidence, both bullets were recovered and both came out of Oswald's gun to the exclusion of all other guns."

He discounted the claim put forth by some assassination investigators that a third bullet was fired, causing then Governor John Connally of Texas to flinch as he sat in the Kennedy car.

"What Connally actually did, as I interpret it, was that he was stunned by the first bullet that tore open his chest and went through his wrist and buried itself in his leg," Lattimore said.

"When he tried to take a first breath, he was agonized, so he clamped his arm over this big hole in his side and that is what they see in the pictures."

Before striking Connally, the first bullet passed through Kennedy's neck, severing his spinal cord at the C-6 segment or near the base of the skull, said Lattimore, explaining what he described as the reason Warren Report critics think the president was making a defensive gesture.

"His arms fly up and that is typical of a wound in the C-6 segment," Lattimore said. "No one has mentioned this. He would have been a quadriplegic after that if he had survived, but it becomes academic because the second bullet took the whole right side of his brain right off."
