CONCERN IN JAPAN

Stocks Down There— Tokyo Seeks to Hold Yen-Dollar Parity NYTimes———

By CLYDE H. FARNSWORTH

Special to The New York Times

PARIS, Aug. 16—Europe and Japan reacted with anxiety and confusion to President Nixon's radical economic measures, as officials were summoned back from August vacations for consultations on what to do.

The first act in all the major centers except Tokyo was to cease official currency dealings. Mr. Nixon's suspension of the quarter-century-old pledge to convert foreign dollar holdings into gold has forced these governments into difficult decisions about the value to set for their currencies in relation to the dollar and other currencies.

Broadly speaking they have these options: to maintain their present currency values, to "float" upward against the dollar or formally to raise the value.

Foreign Stocks Slump

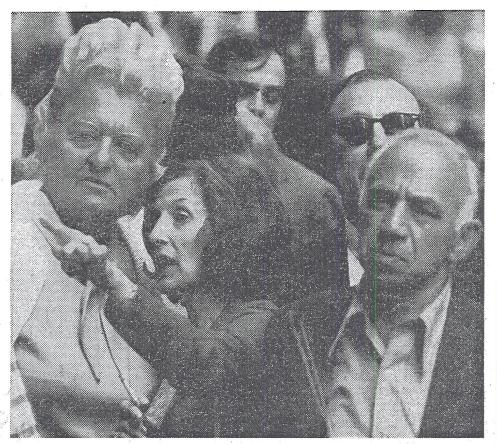

Each of the possibilities poses enormous political and economic complications for a foreign nation. President Nixon's decision, forced by the heavy outflow of United States gold to finance the American balance-of-payments deficits, signals a fundamental change in the development of the postwar monetary system.

The first financial reaction today was a severe slump in foreign stock markets brought on by President Nixon's imposition of the 10 per cent surcharge on imports. This demonstrated the enormous impact the United States has on foreign economic conditions.

Among the stock markets of the world, the Tokyo exchange took the sharpest dive. Nearly one-third of Japan's exports go to the United States. Japan is more heavily dependent on American markets than any other country.

Despite the stock decline, Japan stressed her determination to maintain the yen's present dollar parity by keeping the Tokyo foreign-exchange market open today. Tokyo sources reported the Bank of Japan was forced to absorb more than \$600-million to keep the yen
