

Cambodia Bombings Reported

SAIGON, Jan. 10 (AP)—The United States command announced today that B-52 bombers had attacked North Vietnamese supply routes in Cambodia for the first time in a week. Allied strategy is to use American bombers and South Vietnamese ground troops to slow the North Vietnamese advances.

While only small skirmishes were reported throughout South Vietnam, action was said to be heavier in Cambodia. North Vietnamese and Vietcong forces there were reported to have continued their attacks along Route 4, which is Pnompenh's highway to the sea.

An army camp along the route at Talat, 45 miles southwest of Pnompenh, was reportedly attacked at almost the same time that North Viet-

namese troops were said to have hit Cambodian troops in the town of Kompong Speu, 15 miles northwest. A spokesman said one Cambodian soldier had been killed and seven wounded before bombers silenced the enemy.
