Rogers Asks Vote for Germ War Ban And Senate Critics Hold Their Fire

The committee greeted Mr. Rogerswithonly passing and then good-humored reference to the controversy over whether he is overshadowed as Secre-tary of State by Henry A. Kis-singer, the President's national

Singer, the President's national security adviser.

Senator Stuart Symington, Democrat of Missouri, who set off the controversy by asserting off the controversy by asserting that Mr. Rogers was Secretary of State in title only, drifted into a line of questioning about arms control without any rebuttal to President Nixon's re-buke last night that the Senator had taken a "cheap shot" at Mr. Rogers.

Accountability Stressed

Later in the Senate television gallery, Senator Symington explained that his comments in a Tuesday speech were not intended as personal criticism of Mr. Rogers or Mr. Kissinger but sether years directed at the principles. Mr. Rogers of Mr. Allowards rather were directed at the principle that policy-makers such as Mr. Wissinger should be "ac-Mr. Kissinger should be countable" to Congress.

Mr. Kissinger should be "accountable" to Congress.

From the generally favorable reaction of the committee to Mr. Roger's appeal, it appeared that the Senate would finally approve the 46-year-old protocol, as requested by the President last August. The United States is the only major power that has not ratified the rreaty.

The only controversy expected during Senate consideration was whether to accept the Administration's interpretation—to be stated as an informal "understanding" rather than as a formal reservation to the treaty—that the protocol did not prohibit use of riot-control agents such as tear gas or chemical herbicides used for

MASHINGTON, March 5—Secretary of State William P. Rogers urged the Senate today to approve the 1925 Geneval biological warfare but with the understanding that the United States would remain free to use tear gases and herbicides.

Mr. Rogers argued before the Senate Foreign Relations Committee that American ratification of the treaty, which was xriginally sponsored by the United States, could provide "a positive and constructive movement toward arms control" and "strengthen the legal prohibitions against the use of chemic and biological weapons."

The committee greeted Mr. Rogers withouly passing and then good-hymen.

While acknowledging that there was room for argument, Mr. Robers said it was the Administration's interpretation that the treaty's prohibition against the use of "asphyxiating presponse or other reasons." against the use of "asphyxiating, poisonous or other gases and all analogous liquids, materials or devices" was nit intended to cover tear gases and herbicides, such as the United States has been using in Siuth Vietnam Vietnam.

A move, lead by Senator nam war.

that the hearing, the Federation of American Scientists criticized the Administration's interpretation of the Geneva protocol as ibition "highly questionable legally, yxiat-gases s. malit interpretation of the Geneva protocol as ibition of the Geneva protocol as ibition of the Geneva protocol as important morally and foolish strategically." The federation charged that the Administration's efforts to exclude tear gases and United Siuth herbicides were based on "no reason" except the present use of such chemicals in the Vietnam war.
