*Nixon Improving;
Court Exam Next*

LONG BEACH, Calif., slow recovery from surgery, Nixon today continued his partial lung tissue collapse and a bout with pneumonia, but faced medical examination by three court-appointed Watergate trial doctors.

The next medical statement on the former President's condition was scheduled for Monday morning.

His personal physician, Dr. John C. Lungren, said the former President was well enough to begin receiving anticoagulant treatment this weekend for the first time since his surgery 11 days ago.
