Engineers Talk Set

The Petroleum Engineers Club of Dallas will hear Les Logue Friday speak on "Gravimetric Fundamentals and Geologic Interpretations" at the club's weekly 11:45 a. m. luncheon in the **DEC** phus Hotel.

Mr. Logue, with Don Jopling and Frank Elish, founded Exploration Surveys, Inc., according to Howard R. Brooke, chief scout for Magnolia and publicity man for the club. "Exploration Surveys, 5615 Daniels, has developed the use of the gravity meter and interpretation to a high degree of precision.

"From the initial use of gravity interpretations of Mott-Smith in 1936, the use of the gravity meter has resulted in the discovery of numerous oil and gas fields. It is unquestionably one of the major oil field tools that the industry has today."
