An interview with author R. Harris Smith

055

The SECRET History of

America's First Central Intelligence Agency

BARBARA CADY

BARBARA CADY
What did Allen Dulles, Julia Child,
John Birch, Arthur Goldberg, Walt
Rostow, Stewart Alsop, David
Bruce, Herbert Marcuse, Charles
Hitch, and Arthur Schlesinger, Jr., have in common?

have in common?
"What they had in common was
they were all in the OSS. They all
served as intelligence officers or intelligence analysts during the war.
I'll even add a few names — Ralph
Bunch, Sterling Hayden, Bud
Shulberg, Carson Kanin, and John
Ford. That's good for a little crosssection."

R. Harris Smith does more than name names in his new book, OSS: The Secret History of America's First Central Intelligence Agency. Approaching his subject with the thoroughness and zeal of a dedicated graduate student (which he is), Smith has taken whole basements-worth of unorganized archival material (both classified and declassified), personal interviews name names in his new book, OSS: declassified), personal interviews with over one hundred OSS operatives, and the dry facts of an oss

R. Harris Smith does more than name names in his new book, OSS: The Secret History of America's First Central Intelligence Agency. Approaching his subject with the thoroughness and zeal of a dedicated graduate student which dedicated graduate student (which he is), Smith has taken whole basements-worth of unorganized archival material (both classified and unclassified), personal interviewith over one hundred C OSS with over one hundred OSS operatives, and the dry facts of an entire era and produced a fascinating reconstruction of the New Deal's junket into espionage, sabotage, and guerrilla warfare. The picture he presents is a tragicomic

picture he presents is a tragicomic one — unconventional methods required by the exigencies of war, financial extravagance, chaotic organization, and a checkered record of successes and disasters. According to Smith, the OSS was, in every respect, the brain-child of its founder and director General William "Wild Bill" Donovan, a "civilian general" who had been a successful corporate attorney and a highly decorated World War Two hero. Donovan nurtured the infant highly decorated World War Two hero. Donovan nurtured the infant intelligence agency and mediated its adolescent internal squabbles, assuring its existence in "a twilight zone of civilian-military identity." Donovan ignored the advice of lan Flemming, James Bond's creator and then an officer with British Naval Intelligence, who advised him to choose as operatives men around

to choose as operatives men around to choose as operatives men around forty to fifty years old and characterized by "absolute discretion, sobriety, devotion to duty, languages, and wide experience." In direct contrast, Donovan chose typically bright, young amateurs — usually wealthy — and sent them on daring and often harebrained assignments all over the globe. This gaggle of "reckless" agents was augmented by an operational

was augmented by an operational staff of varied skills, exceptional staff of varied skills, exceptional ability, and disparate backgrounds. In OSS you found the cream of wealth and intelligence — a Yale law professor rubbing leather elbow patches with an Hawaiian pineapple magnate. And you found both ends of the political spectrum — a rightwing journalist rubbing psyches with a communist union organizer. The a communist union organizer. The net result was no small measure of internal disorder and a hail of criticism that would have wilted a more conventional, less optimistic

organization.
As Donovan argued, this very confusion enabled his staff, whether they were to the political left, center, right, to become apolitical gmatists for the hour and to work

pragmatists for the hour and to work as a team for a common cause. Smith's book is unusual, not from the standpoint of its subject matter, but because of the political questions it implicitly poses. On one level, it reads simply as a popular history of an unorthodox governmental agency. On another level, it could serve as a CIA recruiting manual for disenchanted liberals. On yet another level, it sometimes.

manual for disenchanted liberals.
On yet another level, it sometimes appears to whitewash shady OSS dealings, not to mention those of its successor, the CIA. Smith's frequent keystone cop images of OSS and CIA operatives, dashing around the board of a Parker Brothers espionage game, at times belies the deadly shot in the dark realities of deadly, shot-in-the-dark realities of deadly, shot-in-the-dark realities of international intelligence-gathering. Romantic campfire songs shared between American agents and French resistance fighters do not explain away death-inducing mistakes. And OSS medical treatment given to one Ho Chi Minh is merely an ironic footnote to America's history of paramilitary operations in Indochina.

How did you come to write the ms to me that since Arthur Schlesinger, Jr., was an operative in the OSS and since he's written many other books, he might have undertaken the task of writing a history of the OSS. Why hasn't anyone, for that matter, already writ-

in it?
A couple people started writing it.
ornelius Ryan, who wrote The A couple people started writing it. Cornelius Ryan, who wrote The Longest Day, started. Whitney Shephardson, who was a great international relations specialist, started writing it. I think they couldn't find the key element to hold it together. It's a very difficult story to keep together.

What's the key element?

Well, what I felt to be the key element was simply the idea that you had a group of very imaginative, young officers who believed in what they were fighting for and oriented

young officers who believed in what they were fighting for and oriented their intelligence operations that way. It was sort of a reverse CIA, even the techniques were the same as the CIA, but they were fighting fascism instead of communism. They believed they were really helping democracy and fighting for universal freedom and whatever. I think that's dom and whatever. I think that's

freedom and whatever. I think that's the key element in all the country studies that I did in the book. When I started reading the book, especially when I started reading the reviews of the book and some of your off-the-cuff comments about it, it occurred to me that it would make a hysterical movie. Madcap, zany characters, thoroughly convinced that what they were doing was absolutely right ... and committing solutely right ... and committing horrendous blunders in their en-

I have been trying to put together movie scenario, which is difficult

I have been trying to put together a movie scenario, which is difficult to do out of that book. As many people say, it breathes with about nine million facts thrown together without a lot of unity.

You could have Sterling Hayden.

That wouldn't be a bad idea. Bud Shulberg can write it and Abraham Polansky, who is also in it, can direct it. What I would like to do is to focus on the culture shock and the political shock to one, young,

idealistic Yale graduate would be a composite of several people that are in the book — through working with the French is and the communists behind lines before D-Day and then being transferred to Hanoi. There being transferred to Hanoi. There, as some people did, they met Ho Chi Minh and found that he was the new underdog, whereas they had felt that the French were the people they had associated most with. Suddenly the French became the enemies, not the enemies, but certainly the had guys. enemies, but certainly the bad guys, and the Viet Minh became the new

heroes.

They had a lot of heroes in the OSS, particularly the resistance. If you were in guerrilla warfare against the Germans or the Japanese, it was very difficult not to have an emotional rapport with those people. The impact of generally wealthy, well-educated, young New Deal products on the world and the impact of the world on them a world. pact of the world on them, a world

pact of the world on them, a world that they had not seen before, is something that I think would make an interesting drama.

There were a lot of brain-trusters in the OSS and a lot of people that weren't exactly part of the masses. They were America's aristocracy in every serse of the world How would every sense of the word. How would you contrast, having been in the CIA yourself, the kind of people that were involved in the OSS with the kind of people that are involved in the CIA

well, I think at a high level there isn't much difference at all, since most of the high-level officers of the CIA were in the OSS, including the director, of course. The difference, I orrector, or course. The difference, I think, is that these men are no longer twenty-four. That's very significant. They've grown older, more conservative both socially and politically. Their methods are more rectrained.

restrained.

The bureaucracy is certainly much more strict and there's much more red tape than the OSS had. And probably that's for the best. It's fun probably that's for the best. It's fun to read about a bunch of guys who ran around the world conducting secret operations, making some mistakes, and sometimes doing some fascinating things. But that kind of intelligence organization could only function effectively in time of war. When you have a world on the brink of nuclear war; as we on the brink of nuclear war, as we are today, it probably is best that the intelligence organization be much on the brink of nu more conservative in its orientation.

more conservative in its orientation. At least in its techniques. You mean conservative in the sense of bureaucracy.

Right. I'm not saying the politics. It's disastrous that they've also become more conservative in their political attitudes. And again, as I've said to other people that I've talked to, I don't blame the CIA for that. That's a function of our foreign That's a function of our foreign policy. They institute what the White House tells them to.

Do you really believe that?
Yes, I do.
You don't think that the CIA is a
older-formation group in and of it-

Well, there was a time during the Eisenhower administration, when Allen Dulles was the director and his brother was the secretary of state, when you had a lot of CIA indepen-

Nepotism.

Exactly. And I talk a little about Exactly. And I talk a little about Allen Dulles coming to cabinet meetings where he would be asked, 'What does the CIA think we ought to do about this?' And he would say, 'Well, that's not my business. That's the business of the Secretary of State. And everyone would break to the second state. The work of the second state is the second State.' And everyone would break up. It was obviously a pretty funny comment, because they talked to each other every night. It made the life of CIA officers much more independent in the fifties. Since the Bay of Pigs, I can't see that there's been any real independence of field officers. They do what the White House wants them to, or at least what the State Department wants them to.

Well, this is generally not what the liberal press would have the public

Well, I don't know why they feel ne need to blame it on the CIA well, I don't know why they feel the need to blame it on the CIA rather than on Richard Nixon. Frankly, if there is a guerrilla warfare operation in Laos, it's because the White House wants it, not because the CIA wants it.

Does this go back to the Kennedy administration?

nistration?

Well, the Kennedy administration was the breaking point, where the CIA was finally brought into line with official policy. John Kennedy cer-tainly felt that there was a little too much operational freedom. And, again, if the CIA did things, as in the Diem coup d'etat, it was because the White House approved of it and thought it would be a good idea to kick out Diem.

kick out Diem.
Now I think there is much more, not only White House control, but there are very few CIA professionals who I think find the guerrilla paramilitary warfare operations to be a useful thing for the CIA to engage in. It's hurting their image fantastically. It's making it difficult to recruit intelligent people.

recruit intelligent people.

But it's always been a very lowprofile organization. I think that their involvement with guerrilla activities changed that profile. I don't think it's changed that profile. I don't think it's a question of their ideology changing. People are just finding out what the CIA is into and the CIA is embarrassed by it. They feel if everybody would just shut up, we could continue with the insurgency operations. operations.

No. I don't think so, I can't speak what Richard Helms believes, but Helms' whole career as pelieves, but reims whole career as an intelligence officer was in the collection of espionage and the chess game operations in Berlin. I think he believes that the function of think he believes that the function of an intelligence agency is espionage, not to go around supporting guerrillas in the mountains of Laos. It's not only a drain on their activities, I mean, you have to ship huge numbers of people out there — but you also have to pick up officers who are not really trained people. That's why they pick Green Berets on contract.

I have great faith in the young Harvard and Yale guys from Harvard and Yale who went through career training and who are now working in Prague or Berlin or wherever. They're very different kinds of individuals from Green Berets who blow up bridges in Laos. They may both be working for the CIA, but the paramilitary is a you're going to move in the next minute. It's the role of the much-maligned secret agent to find out that kind of information. And I don't think there's any other way to get it through espionage.

Could you elaborate on how you gleaned information for your book? I know that most of it was done know that most of it was done through interviews and I'm interested in how the people reacted to you personally and how much of the secret information they were privy to they were able to tell you.

Beyond the written sources, which, of course, was about fifty per which, of course, was about fifty per cent of the information, I did over a hundred interviews and got letters from another hundred and twenty people. All of them, without exception, were more free and open than I would have expected. Partly, because I didn't tape any of them. I took notes, which is really the only way you can research an inway you can research an in-telligence book. People won't talk into a tape recorder about anything into a tape recorder about anything that's even vaguely sensitive. But, if you don't tape, particularly since I identified myself as former CIA, which none of them ever checked out, I might add, people will tell you the most embarfassing things. None of them stopped at OSS. They would be considered tell me all service of sengo on and tell me all sorts of sensitive state secrets and tell me about conflicts in CIA and State Department and so forth. A lot of that I obviously couldn't print.

What kind of documents did you

what kind of documents did you use? What were your primary sources and were any of them ever classified?

Thirty per cent of the book is based on documents that are still based on documents trial are conclassified and, as I pointed out in a news conference yesterday, the legal distinction between this and the Pentagon Papers is not really that great. There's obviously a timelag.
I found that there were hordes of

Allen Weish Dulles, controversial OSS "master spy" in ne later director of the CIA. His wartime network stretched the tral Switzerlan

fluke. It's not really a function that they're oriented toward conducting, and it's something I think they'd just as soon get rid of.

With the Introduction of extremely sophisticated methods of electronic surveillance, not to mention satellite operations, how useful will the older "code-breaking"

I think that the distinction that's always been important in that kind of intelligence is between capability and intention. That fight's been going on between the CIA and the Pentagon for twenty years. You can say that Russia has x number of missiles and they're offensive or defensive and those aren't really clear terms to start with. But then the really important thing is what are they going to do with them? And that's where an intelligence organization comes in. If Comrade X becomes the premier of Russia and Comrade X wants to launch a preventive war, that's damned im-I think that the distinction that's preventive war, that's damned important intelligence. That's far more important than whether they have forty or forty-eight nuclear sub-

There's no way of telling inte I here's no way of telling intention from satellite photos or even from code-breaking. Czechoslovakia was the great case where electronically we were getting all kinds of different signals from troop movements in 1968. I remember there were a lot of different scares about the Russian invasion of Czechoslovakia. different scares about the Hussian invasion of Czechoslovakia, whereas we didn't know what the Russians intended to do. You move a troop unit to the border, it could mean nothing and it could mean

material in universities like the Hoover institution at Stanford, in boxes in peoples basements. It was a common pracsements. It was a common prace e after the war to take the curnents in your files and to wan-r off with them. Some people kept em at home. Some people gave em to universities as their per-

sonal papers.

In any case, the Hoover material, for instance, which has thousands of pages still stamped Top Secret, still legaly classified, has some of the legaly classified, has some of the most sensitive things, politically, in the book that I revealed. The British plot to overthrow Franco's government, for instance, was in there. When Dr. Langer, the Harvard historian, did a book on America's French policy in 1948, he quoted the same document but cut that entire paragraph out. There were just three

French policy in 1948, he quoted the same document but cut that entire paragraph out. There were just three dots in the book. That kind of thing is still classified. I don't see any reason for it, except that it might embarrass some people. But certainly there's no national security purpose involved.

So you don't think that you'd be involved in any legal hassles?

Oh, people in the CIA read it. The kinds of things they suggested changing had nothing to do with sensitivity. In some cases they just thought I was wrong and in some cases they were right. I did change a few facts, but in no way could they be regarded as things that were personally embarrassing. None of them objected to the things that are really, quote-unquote, HOT in the book.

(please turn to page 8)

White Russian spy groups has relied on Nazi &

(continued from page 3) like the Pope's involvement in an espionage network. Maybe they didn't see it, the book's not written didn't see it, the book's not written in a highly dramatic fashion. It's a history and it was intended to be a carefully thought out history. I'm curious as to what slant you got from working as a member of the CIA and how much of what you knew

were trying to show that the war was not going well. I think we had some impact on Johnson that way. I worked in the CIA counterpart to

the White House situation room. In other words, we were dealing with what is called the President's ingence bulletin that's marked 'For President's Eyes Only.' Ob-sly, he's not the only one who

General William "Wild Bill" Donovan, Director of Strategic Services. OSS was a product of his fertile imaginat

from your job you were able to use. If I had used anything in the book that I got from my job, it would have been illegal. And there's nothing in the book — well, maybe one or two little things, and they're not really from my job. It was from cocktail party gossip that I probably might have avoided using. But even then, no question of sensitivity.

no question of sensitivity.

I do include a few people in the book as former CIA officers who've never been identified that way. Some of them are well known, like Shirley Temple's husband. He's never listed his CIA affiliation and I picked that up at a cocktail party in never listed his CIA affiliation and I picked that up at a cocktail party in Washington. In the job I had, which was analyzing highly classified intelligence information, none of that is involved in the book at all. And I is involved in the book at all. And i would have felt, since I signed an agreement when I left not to use it, a pang of conscience about putting it in the book.

Did you leave the CIA for

n the book.

Did you leave the CIA for declogical or academic reasons?

A number of combining things. It was the last year of the Johnson ad-ministration. I was violently against the war, and it was difficult to read the war, and it was difficult to read the casualty statistics every morn-ing, which was part of our report. A very close friend of mine was killed in action at the time that I was there. He was a marine officer. Just the emotional effect of that was con-siderable.

I was also there when Martin Luther King was killed, and that was difficult to live through because there was a good number of southern bigots hanging around the office. Beyond that I simply got tired

office. Beyond that I simply got tired of the bureaucracy.

How specifically were you involved in the war? What specifically was your job, and did you feel it was intimately related to what was going on over there?

As a matter of fact, I felt that we

As a matter of fact, I felt that we were having as good a purpose as we could have in contradicting the very optimistic reports that were coming out of the Pentagon. We reads it, since we all read it every morning. I think we perhaps did throw in a few ringers that helped make up Johnson's mind on stop ping the bombing and beginning the negotiations. I hope we did. I like to think that we did.
I never felt that I was a part of the

I never felt that I was a part of the war machine. I did quit the agency specifically to go to work for Senator Kennedy. Unfortunately he was killed four days after I resigned. If classified documents you did not have access to were now made available, don't you think an entirely different octure might emerge?

different picture might emerge? No. I think what might emerge

would probably make the OSS look a would probably make the OSS look a lot better than it turned out to be in the book. The great laughable thing about intelligence documents is that people never write anything to make themselves look bad. It's much easier to go to journalistic sources and interviews to find out what really and interviews to find out what really

think that anyone who through the something like 200,000 pages of OSS archives would come pages of OSS archives would come up with a pretty dry account of the wartime activities of the organization. Maybe I'm wrong. But I don't think we're going to know for long time, because the government has no intention of de-classifying that material.

In the last two or three years Ger man documents have become in-creasingly accessible. Did you get a chance to look at any of those? No, I didn't. And I simply didn't

bother, because the Germans kne

bother, because the Germans knew nothing about OSS. I've seen the German description of it. Obviously, they had no idea what it was. You said in your book that the CIA today must adopt an attitude of tolerance for dissent or it, through its membership will become a "reachership will be will membership, will become a "reac-tionary monster." How can this be done?

I think it's been done for a long time. The problem now is that it's become more difficult to do because liberals are just not joining the CIA

anymore. In the early fifties, the CIA was the only place for liberals to go in foreign policy. A lot of people who left the State Department under in foreign policy. A lot of people who left the State Department under McCarthy pressure went into the CIA, because the CIA protected them against McCarthy. And these were the people who began the funding of the National Student Association, which in 1952 seemed like a very liberal thing to do. Obviously, fifteen years later, it had become somewhat outmoded.

But there's still a role for a CIA left wing. I think the role is one of

wing. I think the role is one of people who believe that we should de-militarize our foreign policy and

de-militarize our foreign policy and believing that the way to do that is to get the best intelligence possible about crises before they start.

I worked for a good time for Senator McGovern on a purely ideological basis, and I couldn't see any difficulty in having a CIA function under McGovern. The purpose of an intelligence agency under a of an intelligence agency under of an intelligence agency under a liberal president would simply be to help cut our defense expenditures, to help cut our military involvement. And I think an intelligence service can help perform that service very

ably. I'm not disputing necessarily what you say, but there is an uncomfortable parallel between your point of view regarding the CIA and the argument which opts for the involvement of liberals in the military, the argument which says there must be intelligent, well-trained, liberals in the military or you're going to wind up with a bunch of red-neck hotheads running the show.

Well, it's easier for a liberal to function in intelligence than in the

Well, it's easier for a liberal to function in intelligence than in the military. I can't imagine any great liberal in the military, because, by nature, it's a closed, authoritarian society. I mean, I don't know how else you can have it in the military. An intelligence organization—much of the purpose of it is analysis that isn't really different from a university community.

I think, I know enough friends of mine who are somewhere in between Berkeley revolutionaries and General Motors executives, who could be enticed into the CIA if they just had the general feeling that the

just had the general feeling that the CIA wasn't supporting the most right-wing dictatorships around the

world. It becomes very difficult to begin an intelligence career when you hear rumors that the agency's involved in assassinating presidents and pushing heroin and various other things. Very often unfairly, I think, it's the problem of their image.

think, it's the problem of their image.
They're not getting good people. I think they not only have to allow liberals and ivy-leaguers and well-trained academics to come in, but they actually have to go out and look for them, as Allen Dulles did in the fifties. I'm not sure that the agency leadership realizes how far that it's becoming divorced from the large body of intellectuals and liberals in the United States.

What do you feel about the CIA's

the United States.

What do you feel about the CIA's involvement in heroin traffic?

My position is that I don't know any more than what I read in the newspapers, as they say. But I have a feel for the fact that there is some involvement by American intelligence personnel in Southeast Asia in heroin traffic. I think it's a result of the fact that they've had to

Asia in heroin traffic. I think it's a result of the fact that they've had to quickly pick up a lot of fast-buck guys and send them into paramilitary warfare operations. In their own specific countries? In their specific countries and on their own. I have no doubt that Dick Helms is not a heroin pusher and is appalled by the idea and that the people in Washington are equally appalled by the idea. But when you're faced by a White House directive to run a paramilitary operation in an area where heroin is a chief commercial commodity, you operation in an area where heroin is a chief commercial commodity, you pick up a lot of strange army officers and all kinds of weird people. And I think these weird people are out to make money as long as they're working for the CIA. OSS had that same problem in many ways, a lot of very corrupt people who were out to wake money on their own, rather than to help fight the war.

Could you discuss the transition between the OSS and the CIA?

OSS was dissolved in October, 1945. There is a story that I told in the book, and I was trying to relate it in part to the Ellsberg case. Before

the end of the war, General Donovan, who was the head of the OSS, had a secret directive to President Roosevelt advocating the President Roosevelt advocating the creation of a peacetime intelligence service. It somehow got into the hands of J. Edgar Hoover, who leaked it to a Chicago newspaper for his own political purposes, which is very much the same thing that Dan Ellsberg did. Except that when you're J. Edgar Hoover, it's a lot easier to do. And there was no uproar about it at the time as to Hoover's role. Hoover's role.

The uproar was about this so-called Gestapo, this New Deal Gestapo that was being formed. J. Edgar Hoover did it because he Edgar Hoover did it because he wanted control of OSS functions for the FBI. The Army and Navy also opposed the creation of a separate peacetime organization because they wanted their little bureaucracies to run intelligence operations. operations.

The result was that Congress refused to appropriate money for a new agency, and the CIA took some two years to get formed. It wasn't until late 1947 that we had a CIA. And the fact that they were created in an ad hoc way in a time of what seemed to be Cold War crisis!

think was very detrimental to our view of the Russians. Because the view of the Hussians. Because the CIA was forced, for espionage purposes, to fall back on organizations like the NTS, the Russian monarchist group that wanted to bring the Czar back to Russia. Or people like General von Gehlen, who has now become so well known in the United come so well known in the United become so well known in the office. States. They had no network in eastern Europe, and to get information they had to go to a very right-wing group of people who, I think, influenced the kind of thinking that we had in the State Department

think, influenced the kind of thinking that we had in the State Department and in Washington about our conflict with the Russians.

So people like Dulles and the phenomenon that you just explained contributed to the development of the whole Cold War ideology?

No. Dulles came in later. He didn't come in till 1950 or 1951, and one of the first things he did was to get rid of some of these very strange emigres and right-wing nuts who we were supporting. As right-wing as were supporting. As right-wing as most people think Allen Dulles was, he made a contribution toward get-ting a lot of those people off.the CIA payroll and also to bringing liberals

Certainly things like the Soviet-Chinese rift, which broke our idea of the international communist con-spiracy, was something that came, not out of the State Department, but out of the CIA. And it was because Allen Dulles brought people into intelligence who were willing to think

telligence who were willing to think about those kinds of things and to get rid of the ideas they had been working with for so long. How would you explain the relationship of the FBI vis-a-vis the OSS and the relationship between the FBI and the CIA today? Especially the conflicts of power. There's a good deal of continuity in the two. The FBI was out to get OSS from the start. A couple of incidents I talk about in the book. The OSS was stealing documents from cidents I talk about in the book. The OSS was stealing documents from the Spanish embassy in Washington and the FBI felt it was part of their territory. So they sent an FBI squad car around to the front of the em-bassy at three in the morning, when these OSS men had entered illegally, these OSS men had entered illegally, and turned on their sirens specifically to get the OSS men kicked out. That was the kind of thing that went on for a good many years in the war.

Was it politically grounded?

Well, there's no question that Hoover felt that OSS was unnecessarily hiring too many left wingers; in some cases communists.

wingers, in some cases communists. That was an OSS policy. General Donovan felt that the best people to Donovan felt that the best people to work with the communist resistance were American communists, and as long as they made no secret about their beliefs, he hired them. He sent them to Italy and France and Yugoslavia and China. And, in many cases, they were some of the braver OSS men behind the lines.

J. Edgar Hoover thought that was a disaster. He never guite not over

J. Edgar Hoover thought that was a disaster. He never quite got over the idea we were fighting fascism. He was still running his red-baiting operation from the thirties.

After the war, you didn't have the ideological conflict, as much as a social conflict. The fact is that everyone in Washington knows that FBI types are real straight, cleancut, all-American boys and CIA men are just not that way.

People call some CIA officers the hippies of Washington. That's an overstatement, but in some ways, it

overstatement, but in some ways it has some viability. Their life-styles are completely different from the FBI and it's difficult for the two kinds of

in. That was a Dulles policy. He adopted it from OSS.

adopted it from OSS. Dulles felt you had to have a left-wing in intelligence as well as a right wing, because an intelligence organization should be purely expedient. And I think that contributed a good deal to some of the more open foreign policy thinking that went on in Washington, the fact that Dulles encouraged liberals to go into intelligence.

personalities to get along.
Just last year, before Hoover died,
he issued a directive: for a time, the
FBI wasn't supposed to talk to the
CIA anymore. It made front-page
news. That thing's been going on
now for twenty or thirty years.
Perhaps under Gray now things will
be better.

Was there anything that any of the Presidential administrations that you (please turn to page 9)

The CIA is losing their so-called liberal wing

(continued from page 8) studied tried to do to get the OSS or the CIA to work as a team with the FBI? Or were they just treated as two

feuding kids? Well, I think in a way it isn't a bad idea to keep them feuding. I think it would be disastrous to bring them together. No viable democracy in the together. No viable democracy in the world combines domestic intelligence with foreign intelligence. The countries that do combine them, like Russia and Nazi Germany—now you do have the Committee for State Security in Russia which combines domestic counter-intelligence, hunting down intellectuals with hunting down American agents abroad. ting down American agents abroad. They're different kinds of things, but it puts too much power in the hands of a secret bureaucracy. We have enough power in the hands of secret bureaucracies already without bringing them together.

Oh, I don't know. There's something to be said for enlightened depotism. Political scientists, as you

depotism. Political scientists, as you know, are always talking about efknow, are always talking about efficiency and responsibility in government. It seems like totalitarianism is infinitely more efficient, while it might not be as responsible. In this country, I don't think you have either the responsibility or efficiency. You're always sacrificing, in the name of democratic ideals, a lot of what good government can bring what good government can bring what good government can bring

Well, I'm not sure that that's true I Well, I'm not sure that that's true. I think that in the sense of counter-intelligence, I'd just as soon have inefficiency to some degree.

Well, you certainly had that with the OSS. Some of the tales are hysterical, especially the Japanese code espanade.

code escapade.

By the way, someone from the CIA said it wasn't true. He based it on the fact that he had the documents the fact that he had the documents and I didn't, so I don't even know if the story is true. But certainly General Marshall believed it. Apparently the OSS broke into the Japanese embassy in Lisbon and stole their code books, not knowing that the Nawy Department had stole their code books, not knowing that the Navy Department had already broken the codes. The Japanese, knowing that the code book was stolen, changed the codes. So we were left without any information for a good period of

time.

Reading your book, one becomes aware of how incredibly paranoid, rigid, and anal-retentive a lot of the policy-makers were and are. How do you think our security forces differ from those of Russia, for example.

as we are and were?
Yes. I think counter-intelligence

officers of any country are a lot alike. They're humorless, paranoid alike. They're humorless, paranoid individuals. That's their job. They're supposed to see enemies under every bed, I think, however, intelligence people, people that collect information, that is aggressive intelligence, have a tendency to be more imaginative, more free-wheeling. Perhaps too freewheeling sometimes. But American intelligence people, generally. wheeling sometimes. But American intelligence people, generally, I think, are better than the Russians. Maybe the Russian intelligence people that I've run into are just all very humorless individuals. But certainly there's no sense of the irony or sarcasm that is very strong in CIA halls, and hopefully will remain so. It is difficult to function in a highly secretive bureaucracy without mainsecretive bureaucracy without main taining a sort of detachment from the whole thing and being able to stand back and laugh at it from time

terrible to do it. But the end result was that the people who were doing it lost their jobs. I think perhaps it was badly done and it should have

was badly done and it should have been cut down a bit. Certainly the funding of domestic organizations. But I don't see anything wrong with funding socialist organizations abroad. I think that some of them did some outstanding work. I think the whole paranoia of the thing was overdone. For instance, people didn't go too carefully into the funding operation, but the main conduit ding operation, but the main conduit ding operation, but the main conduit was something called the Kaplan fund. I think if they checked the records in the late fifties you'd find the Kaplan fund also gave money to Pacifica radio when it was starting. I'm not saying that's CIA money, but I think the left would probably jump on that as being an automatic CIA plot.

plot.
SNCC got some money from the
Kaplan foundation. A lot of the civil
rights activity of the NSA probably
was funded in part by CIA funds.

distinction aspect is interesting. No doubt a lot of people in the resistance abroad were from the lower classes. Intellectuals, too, of course. The kind of people the OSS sent over, in contrast, were not engaged in farming in upper New York State.

wen more shocking than that, we of these very rich young ple from Connecticut and sachusetts, whether they were people Massaci working with communist querrilla ents, never met communists before in their lives. I think that what before in their lives. I think that what they found was it wasn't all too shocking to be a communist in France or in Italy and that many of these people were good people, not only good, but very brave people. I think at the time, at least, it might have changed their attitudes a little hit toward political ideologies. bit toward political ideologies.

Now most of these people and says stodgy fellows and say, 'No, No, I didn't like the communists.' But, if Now most of these people are old were an OSS officer

during the war developed some kind of different viewpoint than they may of different viewpoint than they may have had when they went into the OSS. One of the things that I'm trying to do in my dramatic scenario is to show the impact of this on a guy who might well have been Scull and Bones at Yale and came from a Connecticut farm where he raised horses. These were the kind of people who went in. You stuck them in a guerrilla situation and it had a in a guerrilla situation and it had a tremendous impact on their thinking.

I think now we've come to the point where American society is ready to see this kind of thing, to realize that the people supporting Ho Chi Minh in 1945 were Americans and that some of them are now in very establishment positions in the very establishment positions in the United States. But in 1945 Ho Chi Minh welcomed it and actually expected America to be his friend. If things had been a little different, the Vietnam war might have turned out to be an entirely different ex-

It's strange that the American left has not seized on that particular fact, that the U.S. supported Ho Chi Minh, first against the Japanese and then against the French.

think that the American left finds it difficult to think of an American init difficult to think of an American in-telligence agency supporting the left wing. It's the reason I wrote the book, to show them that the operations were the same. If you're going to run guerrilla warfare with the French communists in 1944, it's very easy to use the same techniques to invade Cuba in 1961. And in fact, the people who came up with that operation were ex-OSS men.

Therefore the failure of the Bay of

Therefore the failure of the Bay of Pigs Operation.
That may well have been. Bill Colby, who was an outstanding OSS man with the Norwegian and French resistance during the war, ended up. as our pacification director in Viet-nam some thirty years later as a CIA man. I don't know what his thinking is, but he must have wondered how is, but he must have wondered how he made that turnabout so completely. Maybe he didn't wonder. Maybe those people never think about it. But it's certainly something the American left ought to think about, because it is a tremendous irony in the historical turnabout that's occurred in the last twenty years.

You mentioned in your book that the CIA was a haven for free-thinkers, a bastion of liberals, and a supporter of progressive causes, although clandestinely. That isn't what it is today. I think there is a danger now that

they're losing their so-called liberal

How would you place this in terms

of time?

Well, the great demarcation was the Ramparts exposure, which just demolished the liberals in the CIA. Everything Ramparts exposed was basically the funding of a left-wing

Somehow that really doesn't bother me too much. The point is to get done what you need to do, and if the government has to do it, the govern-

ent does it. I think that the real enemies of the I think that the real enemies of the liberal wing in the CIA is the American liberal establishment itself. It makes it very difficult for liberals to continue to function in any capacity in the CIA. We have there any functioning liberals in the Nixon administration?

I don't know. I haven't met any, but there must be one or two here and there.

with a guerrilla movement, it was pretty hard not to like the people you were working with. You couldn't stay alive unless you had a tremendous emotional rapport with the guerrilla

Other people, like Sterling Hayden, for instance, the guerrilla ment had a tremendous impact on their thinking. Sterling Hayden later said that after he worked with Tito's guerrillas for a year or so, he came back to the United States and joined the communist party for a brief sorted.

that in some cases the

Gary Lawton trial to begin

Riverside had not had any police killed in 28 years until April, 1971, when two white officers, Leonard Christainson and Paul Teel, were shot on the outskirts of a black company. munity. The police then went berserk, raiding black homes and in-terrogating hundreds of blacks.

terrogating hundreds of blacks.

Gary Lawton, Nehemiah Jackson, and Larrie Gardner were finally arrested on the strength of testimony of a 14-year-old white girl who had recently been charged with possession of narcotics, a voice print of Jackson's voice (which allegedly matched that of the person who lured the police to the murder scene), and testimony of two blacks suspected of being paid police inscene), and testimony of two blacks suspected of being paid police informers (one is definitely a dope addict). However, there are 12 witnesses who saw Lawton working on his truck in front of his home when the shooting occurred.

Lawton has sat in jail for months and the trial finally begins in the small conservative town of Indio on

small conservative town of Indio on Sept. 11. The state had the trial transferred there because of "security reasons." But the defense charges reasons." But the defense charges the real reason for the change in venue is that there are almost no black people in Indio to either be able to sit in judgment on the jury or to give moral support.

Lawton is considered by most who know about the trial to be a political

know about the trial to be a political prisoner, framed in the tradition of Angela Davis, although he does not have her communist politics. He was a community leader who fought for better housing, employment, and the naming of a park after Martin Luther King, Jr.

The 33-year-old heavy set and balding ex-marine in no way resem-bles any of the persons whom wit-nesses said did the ambush shooting. They were young and wore naturals. Some witnesses had said some of the killers were young whites. Nor is violence the style of whites. Nor is violence the style of the community leader who first became politically concerned with the death of King. But the local white leaders were upset with the growing demands of the poor communities for reforms.

munities for reforms.

Community programs for social change have been stopped, smashed by the intimidating power of the police. The local newspaper has been entirely slanted against the three men accused. It has also offered a reward for the conviction of the killers. The mayor is head of a committee honoring the two fallen cops and a 30-foot memorial now sits in the center of town commemorating them.

Even though there is no substan-

memorating them.
Even though there is no substantial evidence against the three (except the dubious words of shady characters) and although Lawton passed three lie detector tests, there is no assurance that an all white conservative and biased jury will come up with a not guilty verdict. Because of the injustice of the case (including the state spending hun-(including the state spending hundreds of thousands of dollars to, among of indusarius of dollars to, among other things, import experts from around the country) and because of important political implications, a small group of people have dedicated themselves to fight

for the prisoners.

Only five persons are paid to work full time, although many more volun-

teer their time. But the five lawyers and legal workers work for \$10 a week. They are housed for \$125 a month rent. The house is used by Dave Epstein, National Lawyers Guild attorney from Los Angeles, and others working on the case. A local office rents for \$25 a month. Costs are a minimum but will still run \$10,000.

The defense has had to go

The defense has had to go through 300 hours of tape interviews the police conducted, 1200 pages of preliminary hearing testimony a 600 police reports comprised

600 police reports comprised of about 2000 pages.

Epstein had to start from scratch less than two months ago because the previous court appointed attornies ducked out on the case as it neared trial.

At a recent fundame

At a recent fundraiser in L.A., \$200 was raised from a crowd of 50 persons who heard Chukia Lawton and sons who heard Chukia Lawton and others speak about her husband, the case and the community. Barbara Zahn and Tom Hurwitz spoke about defense efforts to educate and mobilize the community. No one in the black community believes Lawton did it but mobilizing an intimidated populace is difficult. They are waiting for the outcome of the trial

People are needed to help in Indio People are needed to help in Indio and in L.A. Anyone interested in assisting with legal defense, with leafletting communities and speaking with people, with raising funds (there is now \$400 in the bank), or in any other way should contact: Gary Lawton Defense Committee, 2538 Pleasant Ave., Riverside, Ca. 92507 or phone: (714) 683-1465.

Rape revisited

Border Patrol cop charged

Martha Elena Parra Lopez, victim of

Martha Elena Parra Lopez, victim of an alleged rape by a Border Patrol officer at the US-Mexican border and her attorney, Frederick Hetter, have filed a civil suit totalling \$30,000 against Kenneth Cocke, alleged rapist and suspended Border Patrol cop.

The Free Press revealed the May 31 incident in its July 27 issue. Lopez and two companions Teresa Castellano-Perez and Maria Sandoval-Escobedo, were deemed to be illegally in this country since they are Mexican nationals who did not have "proper papers." They were discovered by a traffic cop near the border who then summoned the Border Patrol. They were taken to San Ysidro where they were not booked or held on any warrants. Male companions were imprisoned while Kenneth Cocke drove to the border with neth Cocke drove to the border with neth Cocke drove to the border with the three women. He dropped Lopez' two friends at the border and, despite their protests, drove some 100 yards away in the Otay Mesa area and raped the young mother, according to the three. Border Patrol Deputy Chief Ricard Batchelder told the Free Press that the person responsible was suspended from duty because the was on duty and may have com-

suspended from duty because the was on duty and may have committed a violation of Lopez" civil rights since she was his prisoner." Deputy District Attorney John Hewicker of San Diego said that the officer "certainly violated patrol

regulations by having sex on duty in government vehicle."
But in the last three months of in-

But in the last three months of investigations by the District Attorney,
Edwin Miller, and the US Attorney
General (Harry Steward) nothing
substantive (no criminal charges)
has been forthcoming.
The victims have therefore filed
civil damages and learned the ironic
name of the officer. They have asked
for damages of a general and exem-

for damages of a general and exem-plary nature for all three persons. The total of over half a million dollars is directed at the various

dollars is directed at the various state and federal agencies responsible for Cocke's employment and for the insuing investigation.

The summons and complaint were served on the Border Patrol, the Immigration and Naturalization Service, the Attorney General and the San Diego Attorney General, the FBI, the DA, the San Diego Chief of Police and private attorneys and

FBI, the DA, the San Diego Chief of Police and private attorneys employed by the Border Patrol (McInerney, Milchen and Frank).

Assistant Chief Dale Swancutt of the Border Patrol said he could not respond to press questions because of a court restraining order but did say that "It is well established who the officer was." He also said that "He has not returned to duty." "He has not returned to duty," referring to Cocke.
The plaintiffs feel the government.

has been "passing the buck" and hopes the civil suit will elicit some justice.
