

Seek to Prove Oswald Unaided

Dallas, Tex. — Authorities reconstructed the assassination of John F. Kennedy Wednesday in an effort to confirm for history their view that a lone sniper, acting without conspirators, killed the president.

Police accused Lee Harvey Oswald, 24, of firing rifle bullets into the head and throat of Mr. Kennedy from the sixth floor of a book depository building about 75 yards away.

Oswald, a pro-Communist who spent three years in the Soviet Union, died of a bullet fired Sunday by Jack Ruby, Dallas night club operator. Oswald succumbed before authorities had completed their questioning.

A task force of about 50 federal bureau of investigation agents working 14 hour shifts continued to sift and probe the clues. All evidence was turned over to the FBI by the police department.

Investigative bodies probing Mr. Kennedy's assassination are planned on local, state and congressional levels.

The Dallas Morning News, without naming its source, said FBI Director J. Edgar Hoover is expected to make public evidence that:

- 1, Oswald fired the shots.
- 2, There is no proof of a Communist conspiracy, and
- 3, Investigators lack evidence that Oswald had help.
