

^{of shirt}
Analysis and Necktie

This page, out of the hearings before the Select Committee on Assassinations Claims that the hole is a characteristic of an exit hole. No bullet metal was found in the fabric surrounding the hole in the front of the shirt and a small nick was located in the left side of the knot tie. (Possibly caused by the projectile after it passed through the front of the shirt.)

Description

the outward direction of the hole or the direction of the bullet from the back - the outward.

The hole in the front of the shirt was ragged slit-like and the ends of the thread were facing outward.

- It is evident that the two holes were made when the top button was buttoned. (When unbuttoned it showed as two holes.)

What's not mentioned

- Spectrographic analysis of the margins of these holes showed 'traces of Copper' proved to be foreign to the cloth. (Indicating type of bullet.)
- Cleaning and pressing the Governor's clothing making it impossible for a spectrographic analysis to be done to show what type of bullets damaged the President and the Governor.
- Lack of testimony
- No assurance from the Commission's

Analysis of Shirt and Tie (Cont'd)

Council that the President's clothing had been under constant and careful security to preclude such tampering (the cloth on the holes could easily be turned to face the other way.)

- The number of intervening examinations were not mentioned.

Photograph

- FBI report claims the hole is through both the button and buttonhole portions of the shirt.
- The report doesn't tell about the direction of the bullet - it's obvious that the bullet was at an angle (upward from a back shot or downward from a front (neck) shot.) because the photograph shows the button hole side larger than the button side - which to me, shows an angle. If it wasn't at an angle both hole sizes would be close to the same size.
- Necktie not shown
- No other options mentioned of the nick in the tie except the one that was mentioned ... They say it may have been caused by the projectile after it passed through the front of the shirt.
- They said there couldn't be any further investigation done because of the
