

Deb Metzger

In the investigation of the assassination of President John F. Kennedy focusing on the defects of his shirt and tie I found a few problems. Beginning with the necktie there is a problem. Warren Commission said that there was a hole in the President's tie that was caused by a bullet. The wound on the body was by the adam's apple, and this causes a conflict because people don't wear their ties up on their adam's apples.

It is suggested twice in the reading that the defect in the shirt would appear to be an exit hole. They state that the torn threads around the hole were bent outward giving it characteristics of an exit hole for a projectile. Although it is brought up twice the possibilities of the defect being an exit hole it is also stated at the end that the panel could not assess evidentiary significance to the fiber direction because there were so many examinations.

I felt in reading this article and looking at the picture of the shirt that I don't feel anymore informed than before I read it.
