

Dear Js,

9/24/72 OCT 6 1972

Had to leave this a.m. on fool's errand. Bureaucratic blunder. But it probably will turn out for the best for errant nephew. The mail had not yet been put out so I asked them to hold for pickup on my return. Delight of delights! The Craig, without even a smudge on the professional package, was there. Sister-in-law and nephew came here for supper. But I was impolite enough to be like a baby with a new toy. Without even taking the time to extend the FM aerial I tried it, taping a selection from the Nat. Pub. Radio FM station in DC. Worked great. Side-by-side with the once-expensive and little-used Zenith all-wave, its tone was much better. That happens to be a good spot. Near the TV it does require some of the aerial for elimination of body-capacity on FM tuning. I did make this perfunctory check and it is really of much better quality than anything I've had. Now I'll want to know do the NPR programs reach you? I taped Clark, for example, last night on it. They do broadcast some hearings. I can watch the Post a.m.s for such things. And thanks for the thoughtfulness of the new batteries. Lil's sister was watching when I unpacked. (Nephew atypically taken by Attica report, which he saw me open at post office, was reading it.) Both women admired the note paper Je enclosed. Lil, who is worried about our making it to January when she gets a meager pay for 3 1/2 months, would not think of buying a pretty, but she is quite pleased to have it for her few notes of that kind. She is now making her daily call to her 80+ mother, preparatory to our viewing an ETV show on the workings of the mind. Or at least taking a crack at it. But I did want to acknowledge receipt immediately because this may be a busy week. Gone tomorrow, next day half day, ^{due} Cesar ~~is~~ following, and gone again next, each departure early a.m. And I'm getting a small stack of mail piled up. Some may interest you...The 2 hrs on the mind were fascinating. Much new work. This show represented considerable international collaboration. One of more entrancing sequences Yogi who could mind-over-matter on oxygen needs for xic hours, surviving and staying in trace when he was down to 1/4 minimum! Another subject reducing blood pressure by mind's command. ...WG indictment, DJ release, Williams request for depositions, came today but unread. Also AP house organ piece by Bob Johnson. But to bed, with warm thoughts and repeated thanks,
