Anderson column as it appeared in WxPost 1/9/75 omits this from the fourth from the last graf, the one beginning,"Thereafter, the agecnies began to alert...":"Information about people was cran¢ked into computers, which could produce detailed life histories at the push of a button." Deletion is last sentence of graf. This deletion particularly interesting because it was immediately disclosed that the CIA had FBI computer printouts and today it was further disclosed that the Army's illegal surveillance is computerized, not destroyed, and the CIA is plugged in.
